#### Market Outlook and Investment

The global market volatility kept increasing due to the strong dollar as well as the increasing geopolitical risks in the Middle-east. The market has fully priced-in the risk of US interest rate hike, and the fundamental economic improvement shall be more important for US market.

China government has expressed strong resolution to bolster the economic growth by series of mini-stimulus plans. A prevalent view is that first half of 2015 will be the trough and growth could improve in second half as policy easing effects come through. Financial reform and SOE reform will further help to release the existing restrictions to private capitals on the way to acquire certain percentage stakes of the SOEs.
